GENERAL INFORMATION

BREAK-THRU® is a new generation surfactant based on organo-modified siloxane technology for use in water-based pesticide formulations. BREAK-THRU® is a highly effective nonionic surfactant/wetter/spreader penetrant. The BREAK-THRU® effectiveness may allow the use of the lowest labeled pesticide rate at the lowest recommended surfactant level. Careful observation of spray application is recommended to determine proper and efficient pesticide application. This will optimize the pesticide and surfactant load levels. Read WARNING and precautionary statements carefully before use.

While BREAK-THRU® has been proven to be a highly efficient surfactant, timing, weather conditions, methods of application, crop conditions, and/or mixture with other chemicals not specifically recommended are beyond the control of the seller. Therefore, the user should carefully observe spray deposits, rate efficiencies, compatibilities and effectiveness in initial application and adjust the adjuvant rates accordingly.

DIRECTIONS FOR USE

Pesticide manufacturers may recommend a rate of nonionic surfactant to be used with their product. Follow the pesticide or active ingredient label recommendations on use of surfactant. However, if the pesticide or active ingredient label does not have a specific recommendation for surfactant use, but does not prohibit the use of a nonionic surfactant, BREAK-THRU® should be applied at the rates listed below. Careful observation of spray performance in a trial application with the combination of chemicals to be applied is recommended to determine proper and efficient surfactant rates.

AS A SPRAY ADJUVANT FOR PESTICIDES:

WITH HERBICIDES: Apply BREAK-THRU® at a rate of 6-13 ounces per 100 gallons of spray solution.

WITH PLANT GROWTH REGULATORS: Apply BREAK-THRU® at a rate of 6-13 ounces per 100 gallons of spray solution.

WITH INSECTICIDES: Apply BREAK-THRU® at a rate of 4-8 ounces per 100 gallons of spray solution.

WITH FUNGICIDES: Apply BREAK-THRU® at a rate of 4-8 ounces per 100 gallons of spray solution.

AS A SOIL WETTING AGENT:

FOR ATHLETIC FIELDS, GOLF COURSE TEES, FAIRWAYS AND GREENS

BOOM SPRAYERS: Apply 20 ounces per acre, preferably just before irrigation, although immediate watering in is not essential. Spray volume must be at least 50 gal/acre. Repeat at 14 day intervals or as needed.

INJECTION THROUGH IRRIGATION: Apply 20 ounces per acre. For example: Adjust proportioning valve to inject at the ratio of 1:1000. (To accommodate 100:1 proportioners, mix a 10% solution of BREAK-THRU® and water at 100:1) For irrigation systems delivering around 20,000 gals/acre/hr run injector for first 30 seconds of cycle. Repeat at 14 day intervals as needed.

SPOT TREATMENT OF HYDROPHOBIC AREAS: Spray 3 oz/1000 sq.ft. and water in immediately with irrigation or water spray of at least 5 gal/1000 sq.ft. Repeat as needed.

AS A DEW CONTROL AGENT:

BREAK-THRU® will control dew formation on turf areas such as athletic fields, tees and greens. Apply BREAK-THRU® with a boom or hand sprayer to wet area thoroughly. Use a concentration of 0.2% BREAK-THRU® (25 ounces per 100 gallons).

FOR USE WITH LIQUID FERTILIZERS:

Add BREAK-THRU® to liquid fertilizer/water solutions at rates of 4 to 8 ounces per 100 gallons of mix.
