# Sprint® 330 + Mn

High performance chelated iron and water-soluble manganese micronutrients for improving the quality and growth of professionally managed turfgrass

**Iron (Fe) derived from DTPA chelated iron. . . . . 5.4%**  
**Manganese (Mn), derived from water-soluble manganese. . . . 12.8%**

### General Uses

Sprint 330 + Manganese is a professional formulation of a high performance chelated iron and water-soluble manganese micronutrients to correct specific mineral deficiencies in slightly acid to slightly alkaline soil. The unique blend of Sprint 330 + Manganese delivers an agronomically favored 1:2 ratio of iron and manganese micronutrients.

Professional turfgrass managers have come to rely on the proven performance of Sprint 330's powerful DTPA chelate to deliver the correct amount of iron in a plant available form. Field research trials have shown that supplemental additions of chelated iron in combination with manganese improve overall turf quality and performance under the most demanding growing conditions.

Sprint 330 + Manganese provides up to 30 days of supplemental micronutrient feeding to the plants. Superior performing turf results in stronger, healthier growth, better resistance to and recovery from disease and insect damage, and a higher level of customer satisfaction.

### Directions for Use

Applications should be made as thorough cover sprays and the addition of up to 0.5% wetting agent (1 pt / 25 gals spray volume) to the solution may help insure uniform distribution.

The use of Becker Underwood's spray pattern indicator, Turf Mark Blue or Turf Mark Green is also recommended to help avoid skips and overlaps during the application process.

To facilitate mixing, slowly introduce Sprint 330 + Manganese into at least 1/2 the required spray volume while agitating

### Golf Greens

Apply Sprint 330 + Manganese at the rate of 6-12 oz. / 1000 sf in sufficient carrier to get uniform coverage. Allow at least 30 days between applications.

### General Turf Applications

Apply Sprint 330 + Manganese at the rate of 6 oz. / 1000 sf.

*Note: The addition of 0.1 lb. ammoniacal N per 1000 sf can enhance iron uptake.*

Available in 50 lb. drum.
